Bajaj Allianz Moves Cover System to Cloud

Bengaluru: Bajaj Allianz General Insurance has moved its insurance administration system to the Cloud using IT services provider TCS' Bancs platform, in what is perhaps the first instance of an Indian insurer leveraging the public cloud to manage core operations. Cloud has been used for smaller, add-on systems but as core systems begin to move, experts forecast a massive growth in the country's cloud market.

"With this new cloud platform, we will be able to leverage an array of digital technologies in addition to optimizing our infrastructure for better availability and scalability," Tapan Singhel, MD and CEO, Bajaj Allianz General Insurance, said. The deal uses TCS Bancs cloud for insurance on the Amazon Web Services platform. —Our Bureau
